Subject: September 2018 Saint Gobain test results
Attachments: IISProxy (51).pdf

Good afternoon, I am sending you the most current report we have about Saint Gobain.

These new numbers are to say the least shocking, but not surprising to us, as we have been saying that the contamination is getting worse. After several requests for help in our situation, could these numbers be the catalyst to us being taken seriously? GEN X is here and is not going away! What other New chemicals are going to show up from a company that does not produce them, but uses them in their products?

When are we going to get help?

How much longer do we need to be poisoned? How many more residents need to get sick?

When is the state going to be PROACTIVE and not REACTIVE?

Thank you in advance for your time and attention.

Katharine Hodge
